	Transporter Shuttle	Information not available online
	Jetta Sports TDI	Not on website (no longer produced?)
Volvo	V50 S D Drive Estate	V50 superceded by V60

## **BMW**

### **Sun protection glass:**

Option 420 and 761 differ only by naming, this provides Sun Protection Glazing with a light transmittance value range of 18 – 42% and shading of 58 – 82%. This would be for windows behind the B-pillar (i.e. the rear-side windows and rear screen), plus glass sun-roof.

Unfortunately we don't have the precise figure per model and different glass suppliers may have different values within the range  
The front screen and front-side windows would have a light transmittance of 78 +/- 2 %.

The below image shows the differences between windscreens, other windows and Sun Protection Glass:

	Light transmittance 380-780 nm	Shading 380-780 nm	UVA transmittance < 380 nm	IR transmittance (heat) >780 nm
Laminated safety glass (windscreens)	78 +/-2%	22 +/-2%	0%*	40 +/-5%
Single sheet safety glass (all other windows, or just front side windows if Sun Protection glass is ordered)	79 +/-2%	21 +/-2%	21-34%*	30 +/-10%
Sun protection glass (option 420)	18-42%	58-82%	4-9%*	10-30%

**Glass:**

\*UVB = 0%

For information the government advice on legal limits for light transmission states:

Vehicles first used on 1 April 1985 or later

The front windscreen must let at least 75% of light through and the front side windows must let at least 70% of light through.

There are no rules for tinting the rear windscreen or rear passenger windows.

For the vehicles you requested information, please see the last row for information (Sun Protection Glass (Option 420))
